PROFESSIONAL SUMMARY

Product Manager with 9+ years across product, manufacturing quality, and systems - turning complex problems into roadmaps, shipped features, and measurable results.

I'm a Product Manager who grew up on the operational side of complex, regulated industries - automotive manufacturing and tire production - before moving into digital product. That path taught me to respect process, data, and the people who actually do the work.

I've owned product backlogs and roadmaps for data products, translating stakeholder needs into prioritized, shippable outcomes. I'm strongest where strategy meets delivery: aligning stakeholders, defining KPIs, and making sure the right thing gets built - and measured.

SKILLS

Product Strategy: Product Vision, Roadmapping, Backlog Prioritization, Discovery, Product Features, Market Analysis

Delivery & Program Management: Agile / Scrum, Large-Scale Scrum (LeSS), Leading Development, Status & Planning, Production Support

Stakeholder Management: Stakeholder Alignment, Presenting Ideas, Cross-team Communication, Mentoring, Facilitation

Data & Analytics: KPI Definition & Tracking, Data Analysis, Business Intelligence, Tableau, SQL, Reporting, Quality Metrics

Quality & Compliance: Quality Planning, Standards & Specifications, Corrective Action Plans, Verification, Information Security

Tools: Jira, Confluence, Notion, Cursor, GitHub, AWS, MES / LEPS, Pact (Contract Testing)

EXPERIENCE

Product Manager | Better Collective

May 2025 - May 2026 - Hybrid

- Directed a complete system overhaul and architectural transition for data scraping, ensuring enhanced modularity and long-term maintainability.
- Orchestrated an 8x increase in scraping speed by implementing high-performance methodologies, including cURL and direct API integrations.
- Led the development of a highly scalable infrastructure designed to support unlimited account expansion and rapid company growth.
- Built API integrations with business applications - including Salesforce - connecting the data platform to internal tools and establishing a unified ecosystem for company-wide development.
- Managed cross-functional integrations across teams and systems, ensuring seamless data flow and alignment with strategic scalability goals.
- Supervised the full project lifecycle of a modern scraping engine, aligning technical execution with strategic business scalability goals.

Product Owner - Data | Better Collective

Oct 2022 - May 2025 - Hybrid

- Owned the product backlog, roadmap, and vision for data products - prioritizing work against business value and aligning stakeholders on strategic direction.
- Served as the primary liaison between engineering, analytics, and business teams, leading the development process from discovery through delivery.
- Translated customer and stakeholder needs into well-defined product features, presenting ideas and progress through regular status meetings and stakeholder updates.
- Identified improvement areas across the data product portfolio and drove initiatives to strengthen delivery, usability, and cross-team collaboration.
- Defined and tracked KPIs to measure product success, inform backlog prioritization, and demonstrate measurable impact to leadership.

Process Quality Engineer | Michelin

Mar 2021 - Oct 2022 - Full-time

- Owned quality planning for products, materials, processes, and methods - analyzing production data to raise standards and drive continuous improvement.
- Led industrialization of new products, establishing and implementing obtention standards, verification plans, and process parameters aligned with central and local Michelin referentials.
- Ensured compliance with obtention and verification standards across the floor - coordinating training updates and customer/supplier specifications with associated quality indicators.
- Implemented quality tools and methodologies (problem resolution, uniformity, BPC, MTP) advocated by MMW and the oversight entity.
- Analyzed market quality results - complaints, nonconformities, and pre/post-curing defects - to identify root causes and guide corrective action plans through implementation.
- Mentored operators and quality correspondents on manufacturing standards, improving consistency and enabling faster, more effective reactions to deviations.

Senior MES Administrator | LEONI

Oct 2019 - Mar 2021 - Nis

- Developed and continuously improved LEPS production systems based on client requirements - implementing, configuring, and maintaining the platform that powered shop-floor operations.
- Led and contributed to LEPS projects end to end, creating IT solutions that optimized production throughput and built reports on productivity, efficiency, and first-time-right (RFT) performance.
- Trained and supported junior LEPS Administrators and users - mentoring teams on system usage, troubleshooting, and day-to-day production support.
- Administered user policies, accounts, e-mail, and storage quotas - coordinating IT resource access and ensuring policies, procedures, and work instructions were understood and followed on the floor.
- Managed database administration and general IT troubleshooting, resolving issues quickly to minimize production downtime.

MES Administrator | LEONI

Jun 2017 - Oct 2019 - Serbia

- Administered the LEONI Production System (LEPS) - maintaining servers, client PCs, databases, and WAN/LAN network connections to keep shop-floor operations running without interruption.
- Monitored system health through regular checks and supervised data backups, preventing overload blockings and protecting production-critical information.
- Provided 1st-level support for LEPS users on the shop floor and in the office - coordinating with process experts, LEONI 2nd level, MAR, and external equipment suppliers to resolve issues quickly.
- Analyzed and tested local IT solutions before production rollout, reporting findings to IM and preparing purchasing orders to keep IT equipment stocks current.
- Supported full production operations - monitoring processes and planning based on client order characteristics to align IT systems with manufacturing demand.

SELECTED PROJECTS

Metrify - Next-Generation Affiliate Data Scraping

Better Collective - May 2024 - May 2026

Led product delivery of a next-generation scraping system to collect, process, and store affiliate account data at scale - replacing a slower, less reliable legacy setup.

Scraping speed: 8x faster | Data quality: Significantly improved | Architecture: Modular & scalable

Starcross 6 - New Tire Line Launch

Michelin - May 2021 - Sep 2022

Introduced a brand-new off-road motorcycle tire line into production, coordinating new compounds across quality and operations.

New product line: Starcross 6 | Scope: New compounds | Defect rate: < 2%

Frontend - BMW Line Relocation & Ramp-up

LEONI - Jul 2018 - Sep 2020

Relocated a BMW front-bumper cable project across countries - three production lines moved, reconfigured, fully tested, and brought to full capacity.

Lines relocated: 3 | Transfer downtime: 1 week | Ramp-up to full capacity: 2 weeks

G2X - BMW Z4 & Toyota Supra New Project

LEONI - Nov 2017 - Sep 2020

Stood up systems for a major new automotive program from day one: positioning lines, installing and configuring all production IT.

Customers: BMW - Toyota | Daily production: 300 harnesses | Equivalent output: ~300 cars/day

EDUCATION & ACHIEVEMENTS

Master's Degree, Electrical & Electronics Engineering

Completed a Master's at the Faculty of Electronic Engineering, University of Nis - while raising a young family.

CIP Patent - Systematic Quality Fix (RS 1)

Designed a systematic improvement on the Frontend project that eliminated recurring cable complaints and saved the company significant cost.

Half-Marathon Finisher

Set a personal bucket-list goal and finished a 21 km half marathon - a reminder that consistency beats intensity.
